

Solution Requirements

Date	07 July 2026
Team ID	XXXXXX
Project Name	Personalized Networking Assistant
Maximum Marks	4 Marks

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users shall securely register, log in, and manage their profiles using authenticated access.	High
2	Authorization levels	Registered users can generate conversation starters, verify facts, and access their session history. Administrators can monitor logs and manage system data.	High
3	External interfaces	The system shall integrate with the Wikipedia API for fact verification and AI models (DistilBERT and GPT-2) for theme extraction and conversation generation.	High

4	Transactions processing	The system shall process user requests by analyzing event descriptions, generating AI conversation starters, verifying facts, and storing session data.	High
5	Reporting	The system shall display generated conversation starters, verification results, user session history, and activity logs through dashboards	Medium
6	Business rules, etc.	Conversation starters must be generated only after successful event analysis. Fact verification must occur before displaying verified responses. Each networking session shall be uniquely recorded.	High
7	Compliance to laws or regulations	The system shall protect user information by following applicable privacy and security practices and using HTTPS for secure communication.	Medium
8	<i>Other</i>	Users shall be able to review previous networking sessions, conversation history, and fact-check results.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The system shall generate AI conversation starters and return results quickly.	Response time $\leq$ 3 seconds for normal requests
2	Scalability	The application shall support increasing numbers of users and networking sessions without significant performance degradation.	Supports at least 1,000 concurrent users
3	Security & Data Privacy	User profiles and session information shall be securely stored, and communication shall be encrypted.	HTTPS, password hashing, secure data storage
4	Reliability & Availability	The system shall remain available with minimal downtime and recover gracefully from failures.	99.9% uptime
5	Usability & Accessibility	The application shall provide an intuitive interface that is easy to use across desktop and mobile browsers.	User-friendly interface with responsive design
6	Other	The system shall be maintainable, modular, and portable for future enhancements.	Modular FastAPI architecture and reusable code
