

Technology Stack

Date	07 July 2026
Team ID	XXXXXX
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., <i>React, Angular, HTML/CSS</i>)	Streamlit (Python)	Provides a simple, responsive, and interactive web interface for users to enter profiles, event descriptions, and view AI-generated conversation starters with minimal development effort.

2	Backend / Server-Side (e.g., <i>Node.js, Python/Django, Java</i>)	FastAPI (Python)	Handles API requests efficiently, integrates seamlessly with AI models, and offers high performance with automatic API documentation.
3	Database / Data Storage (e.g., <i>MySQL, MongoDB, PostgreSQL</i>)	JSON/CSV (Local Storage)	Stores user profiles, networking sessions, generated conversation starters, fact-check results, and interaction logs in a structured format for retrieval and analysis.
4	Cloud / Hosting / Deployment (e.g., <i>AWS, Azure, Heroku, Docker</i>)	Docker + Local Deployment (or Streamlit Community Cloud/Render if deploying online)	Provides a consistent runtime environment, simplifies deployment, and supports future scalability.
5	Version Control & CI/CD (e.g., <i>GitHub, GitLab, Jenkins</i>)	GitHub + Git	Enables version control, collaborative development, code backup, and project tracking.

6	Third-Party APIs / Other Tools (<i>e.g., Stripe, Twilio, Google Maps</i>)	Wikipedia API, DistilBERT, GPT-2, Hugging Face Transformers	Wikipedia API verifies factual information. DistilBERT extracts themes from event descriptions. GPT-2 generates personalized conversation starters. Hugging Face provides pretrained transformer models.
