

## Solution Architecture

|                      |                                          |
|----------------------|------------------------------------------|
| <b>Date</b>          | 07 July 2026                             |
| <b>Team ID</b>       | XXXXXX                                   |
| <b>Project Name</b>  | <b>Personalized Networking Assistant</b> |
| <b>Maximum Marks</b> | 5 Marks                                  |

### Solution Architecture Diagram:

## Component Description Table

| Component Name              | Description / Role in Architecture                                                                                                                                | Technologies Used                                                             |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| <i>[Presentation Layer]</i> | <i>Provides the user interface where users register, enter event descriptions, generate conversation starters, verify facts, and view networking history.</i>     | <i>Streamlit, Python</i>                                                      |
| <i>[API Gateway]</i>        | <i>Receives client requests, routes them to backend services, and returns responses securely.</i>                                                                 | <i>FastAPI</i>                                                                |
| <i>[Microservices]</i>      | <i>Handles user authentication, event analysis using DistilBERT, AI conversation generation using GPT-2, Wikipedia fact verification, and session management.</i> | <i>Python, FastAPI, Hugging Face Transformers, DistilBERT, GPT-2, PyTorch</i> |
| <i>[Database]</i>           | <i>Stores user profiles, event contexts, networking sessions, AI-generated conversation starters, fact-check records, and system logs.</i>                        | <i>JSON/CSV, Pandas</i>                                                       |
